Janus

📖 README.md

Janus: Vim Distribution

This is a distribution of plug-ins and mappings for Vim, Gvim and MacVim.

It is designed to provide minimal working environment using the most popular plug-ins and the most common mappings.

The distribution is completely customisable using a `~/.vimrc.before` and `~/.vimrc.after` Vim RC files.

Updating to the latest version

To update to the latest version of the distribution, just run `rake` inside your `~/.vim` directory.

NOTE: If you ever have an error updating Janus relating to a missing commit in a submodule, please try running `rake` again before submitting an issue.

<https://github.com/carlhuda/janus>

spf13vim

The screenshot shows a Vim editor window with the title bar "README.markdown (~/Code/spf13-vim) - VIM". The editor is displaying the README file for spf13-vim. The first line is "# spf13-vim : Steve Francia's Vim Distribution". The second line is a large ASCII art logo for "spf13-vim". The third line is a paragraph of text: "spf13-vim is a distribution of vim plugins and resources for Vim. It is a good starting point for anyone intending to use Vim for development. The distribution is completely customizable using a ~/.vimrc.local and...". The status bar at the bottom shows "N BR: 3.0 | README.markdown unix | utf-8 | markdown 2% LN 10 C 7" and a message "README.markdown" 419L, 15789C written".

Ack

<https://github.com/mileszs/ack.vim>

ack.vim

This plugin is a front for the Perl module [App::Ack](#). Ack can be used as a replacement for 99% of the uses of *grep*. This plugin will allow you to run ack from vim, and shows the results in a split window.

The *Official Version* of this plugin is available at [vim.org](#).

Installation

Ack

You have to install [ack](#), of course.

Install on Debian / Ubuntu with:

Argument List

:args *.*	index.html app.js
:args **/*.js *.css	app.js lib/framework.js app/controllers/Mailer.js
:args **/*.* :args *	Ваше все
:args `cat filelist`	Результат выполнения cat

Argument List

:args — Вывести содержимое args

:args *.*	index.html app.js
:args **/*.js *.css	app.js lib/framework.js app/controllers/Mailer.js
:args **/*.* :args *	Ваше все
:args `cat filelist`	Результат выполнения cat

Argument List

:args — Вывести содержимое args

:args {arglist} — Изменить содержимое args

:args *.*	index.html app.js
:args **/*.js *.css	app.js lib/framework.js app/controllers/Mailer.js
:args **/*.* :args *	Ваше все
:args `cat filelist`	Результат выполнения cat

:argdo normal @a

:argdo %s/Foo/Bar/g

:argdo[!] {cmd} — Выполнить над содержимым
args

:argdo normal @a

:argdo %s/Foo/Bar/g
